

Access Controls Worksheet — Incident Investigation

Unauthorized Payroll Deposit Incident (Event ID 1227)

Category	Note(s)	Issue(s)	Recommendation(s)
Authorization / Authentication	• Event traced to user account LegalAdministrator, an account belonging to the Legal department, not Finance/Payroll. • Occurred 10/03/2023 at 8:29:57 AM from IP 152.207.255.255, on host Up2-NoGud — a device not listed under any known employee in the Employee Directory. • Event added a payroll deposit event referencing 'FAUX_BANK', an unrecognized/external bank record.	• A Legal-department credential was used to create a Payroll transaction — the account had access far beyond its job function (excessive/standing privileges, violates least privilege). • The device (Up2-NoGud) and IP do not match the legitimate user's normal workstation, suggesting the account was compromised, shared, or left active after the employee's role/departure and was used by an unauthorized/malicious actor. • All employees share one cloud drive with no evidence of role-based folder/file permissions, so a single compromised login can reach financial resources.	• Implement role-based access control (RBAC): restrict payroll/finance functions to the Finance team only; the Legal-Administrator account should never have had write access to payroll records. • Enforce multi-factor authentication (MFA) on all accounts, especially administrator-level and financial-system accounts, to prevent use of a stolen/shared credential. • Establish a deprovisioning/access-review process: promptly revoke or rotate credentials for employees who change roles or leave, and periodically audit which accounts hold administrator rights. • Move off a single shared cloud drive to a system with granular, need-to-know permissions and require approval workflows for new payroll bank-account additions.
